

ReviewLabs (reviewlabs.space): Product Document

📅 Sep 30, 2026 · @Satyabrata Mohanty

What ReviewLabs is

ReviewLabs (reviewlabs.space) helps local businesses get more Google reviews, catch unhappy customers before they post in public, and reply to every review in minutes. It does this without review gating or AI-written customer reviews, the two tactics Google now penalizes.

Pitch: "More Google reviews, faster fixes for unhappy customers, and nothing that gets your profile flagged."

Who it serves

Segment	Why they buy	Plan
Single clinics, salons, cafes (launch wedge: Bengaluru dental and skin clinics)	One bad review costs real bookings	Starter
Chains and franchises (3 to 50 outlets)	Compare outlets, standardize replies, catch problems per location	Multi-location
Local marketing agencies	Resell under their own brand to clients	Agency
US, UK, UAE small businesses (later)	Self-serve alternative to \$300+ tools	Global

Three things ReviewLabs does

1. Collect: one QR, email or WhatsApp link per customer, with Google and private feedback offered side by side at every rating.
2. Recover: ratings under 4 open a ticket, alert the owner and track the fix until it's resolved.
3. Reply: AI drafts replies to Google reviews using what the business knows, such as fixes it made and tickets it closed, and publishes on one tap.

Problem and market

The problem. Reviews decide which local business gets picked, and the bar keeps rising. BrightLocal's 2026 survey found 41% of consumers always read reviews (29% a year earlier), 31% only use businesses rated 4.5 stars or higher (17% a year earlier), and 74% want reviews from the last three months ([PinMeTo](#)). Owners know this, so many buy cheap tools that filter out unhappy customers or write reviews with AI. Google banned both in its April 2026 policy update ([Launchcodex](#)).

The shift. Consumers using AI tools to find local businesses jumped from 6% to 45% in a year, while Google's share fell from 83% to 71% ([Digital Applied](#)). A business's own crawlable review page now matters alongside its Google profile.

Market size. Estimates for online reputation management software disagree by 3x, so read them as a range: \$4.8B to \$14B in 2025, growing 6% to 17% a year ([Mordor Intelligence](#), [Market Research Future](#), [WiseGuy Reports](#)). Mordor puts SME adoption as the fastest-growing segment at 16.7% a year.

India target (assumption, not sourced): 50,000 multi-location or high-footfall businesses (clinics, salons, gyms, restaurant chains, dealerships) at ₹1,500 a month is a ₹90 crore ARR pool. About 560 of them paying gets ReviewLabs to ₹1 crore ARR.

How ReviewLabs works

Every customer gets the same ask and sees the Google button at every rating. Unhappy customers get an extra private channel, not a replacement for Google.

The customer side: scan or tap, rate, choose Google or private (or both), answer 2 or 3 short questions if they go private. Under 30 seconds.

The owner side: a phone dashboard with three queues. New tickets to fix, reply drafts to approve, and a weekly digest of what customers praise and complain about. Five-star reviews with no text can reply automatically.

What ReviewLabs never does: hide the Google option from low raters, write a review for a customer, offer rewards for reviews, or hide low ratings on the public review page.

Feature set by release

Release	Features	Needs Google API?
v1 Collect and recover (week 6)	QR codes and printable standees; email requests with one reminder; WhatsApp click-to-chat links; ReviewLabs review page with two equal buttons; private feedback with follow-up questions; recovery tickets with SLA and push alerts; public review page at <code>reviewlabs.space/reviews/{business}</code> with structured data; dashboard; Razorpay billing	No
v2 Reply (week 10)	Connect Google; live review sync; AI reply drafts in English, Hindi and Kannada; fix log as reply context; approval rules and 5-star auto-reply; match Google reviews to requests	Yes
v3 Grow (week 16)	Feedback theme tagging and weekly digest; multi-outlet comparison; agency console with white label; Reply SEO add-on; inbound webhook for billing and booking tools; free review health audit page	Partly

The differentiator sits in v2: replies grounded in the business’s own fix log and closed tickets, so a draft can truthfully say “we moved to staggered slots this month” instead of a generic apology.

Competitors and positioning

Competitor	Market	Price	Where ReviewLabs wins
------------	--------	-------	-----------------------

SmartReviewer AI	India, SMB	₹399 base, ₹50 per keyword, ₹299 per outlet	Its AI-written, keyword-seeded reviews conflict with Google's 2026 policy; ReviewLabs is the safe replacement
Advizr Media	India, SMB	₹499/mo	Same gating risk ("Negative Review Shield")
ReviewPilot	India, SMB	From \$16/mo	Its reply drafts are generic; ReviewLabs drafts from the fix log and tickets, plus the recovery loop
Famepilot	India, chains and enterprise	Quote only	Transparent pricing, self-serve setup, faster for 3 to 50 outlet chains
Birdeye	US, all sizes	\$299 to \$449 per location/mo, annual contract	One-tenth the price, monthly, WhatsApp and Indian languages
NiceJob	North America, field services	\$75 to \$125/mo	Indian channels, rupee pricing, recovery loop

Positioning: priced between the ₹399 tools and the \$300 suites, and the only option in that band that is compliant by design, recovers unhappy customers, and writes replies grounded in what the business actually changed.

The biggest outside threat: Google adding its own review request, QR and alert features inside Business Profile. ReviewLabs survives that only through recovery, context-aware replies and multi-outlet reporting, which Google is unlikely to build for small businesses.

Pricing and plans

Public prices, monthly, cancel anytime. Yearly plans get two months free and a QR standee plus NFC tap card.

Plan	Price	Includes
------	-------	----------

Starter	₹799/mo for the first outlet, ₹399 per extra outlet	300 requests per outlet, QR kit, review page, recovery tickets and alerts, public review page, basic CRM
Growth	₹1,999/mo for the first outlet, ₹699 per extra outlet	1,000 requests per outlet, AI reply drafts in 3 languages, auto-reply rules, fix log, themes and weekly digest
Agency	₹599 per outlet, 25+ outlets	Growth features, white label, client billing, agency console
Reply SEO add-on	₹50 per keyword per month	Service and area keywords woven into owner replies (never into customer reviews)
Global (later)	\$39 / \$89 per outlet	Starter and Growth for US, UK, UAE

Against SmartReviewer's pricing:

Setup	SmartReviewer	ReviewLabs Starter
1 outlet	₹399	₹799
5 outlets	₹1,595	₹2,395
10 outlets	₹3,090	₹4,390

The gap stays at 1.4x to 2x instead of 3x to 5x, which a recovery loop and policy safety can justify.

Unit economics on free infrastructure: email and AI cost near zero until about 40 active outlets. After that, Starter's main cost is email at roughly ₹30 to ₹50 per outlet a month, leaving gross margin above 85%.

Tech stack

Layer	Choice
App and API	Next.js (App Router, TypeScript), Tailwind, shadcn/ui, installable PWA

Database, auth, jobs	Supabase: Postgres with Row Level Security, Auth, Queues, pg_cron, Edge Functions, Vault, Storage
AI	Free Chinese models behind one router: Z.ai GLM-4.7-Flash first, then Qwen3-32B on Cerebras, then Qwen3-32B on Groq
Email and alerts	Brevo, Resend as overflow, Web Push for owner alerts
Google	Business Profile APIs for sync and replies, Cloud Pub/Sub for new-review events
Payments	Razorpay Subscriptions
Protection and monitoring	Cloudflare Turnstile, Sentry, PostHog

The whole stack runs free until the first paying customer. Supabase Pro and a commercial hosting plan are the first two bills, together about ₹3,800 a month.

Full schema, routes, AI guardrails and the 16-week build timeline live in the [ReviewLabs: Build Plan](#).

Roadmap, growth targets and outlook

Milestones

- ☐ Week 1: apply for Google Business Profile API access, register reviewlabs.space email sending
- ☐ Week 6: v1 live, 10 pilot outlets onboarded free for 30 days
- ☐ Week 10: v2 live, Google sync and AI replies running for pilots
- ☐ Week 16: 10 paying outlets and one agency on a paid pilot
- ☐ Month 12: 200 paying outlets

Growth scenarios. Modeled at ₹1,000 blended revenue per outlet per month (lower than a flat per-location price because extra outlets cost ₹399, but chains become far easier to sign). These are scenarios, not forecasts from data.

Scenario	Month 6	Month 12	Month 24	What has to be true
----------	---------	----------	----------	---------------------

Bear	15 outlets, ₹15K MRR	60, ₹60K	180, ₹1.8L	Direct sales only, part-time effort
Base	40, ₹40K	200, ₹2L	700, ₹7L	One vertical works, 3 to 5 agencies reselling
Bull	80, ₹80K	500, ₹5L	2,000, ₹20L	15+ agencies, one chain with 100+ outlets, first US customers

Outlook: 6 out of 10. Demand is proven and the 2026 Google crackdown opens a window against gated tools, but defensibility is low and SMB churn runs 3% to 5% a month. My rough odds over 24 months: 45% stall under ₹1 lakh MRR, 40% reach ₹3 to 7 lakh, 15% break out. The three signals that raise the odds: an agency signs within 90 days, pilot owners can see rupees saved by the recovery loop, and ReviewLabs gets your main focus for 6 months.

Risks and kill criteria

Risk	Likelihood	Response
Owners want gating or AI-written reviews because ₹399 tools offer them	High	Sell recovery value and policy risk; walk away from buyers who only want fake volume
Google API access delayed	Medium	v1 needs no API; Google features switch on later
Google builds request, QR and alert features into Business Profile	Medium	Compete on recovery, grounded replies and multi-outlet reports
Free AI or email tiers shrink or disappear	Medium	Adapters in lib/ ; paid fallbacks cost cents per 1,000 calls
SMB churn above 5% a month	Medium	Yearly plans with standee bundle, monthly "customers recovered" report
Domain conflict: reviewlabs.space was earlier planned for Paylane	High until decided	Assign the domain to one product before printing any standee
Founder time split across products	High	Time-box a 90-day test and decide on the numbers

Kill or pivot at day 90 if fewer than 10 outlets pay, fewer than 30% of pilot owners open recovery alerts weekly, or no agency agrees to a paid pilot.
